Parth Gupta

AI Engineer — Agent Harnesses & Coding Agents
hello@parthg.dev | parthg.dev | github.com/parthg1901 | linkedin.com/in/parthg1901

Summary

AI engineer who builds production agent harnesses: agent loops, tool orchestration, prompt-cache engineering, MCP/ACP integration, and evals. Focused on making long-running agents reliable, cheap and measurable.

Experience

Almanak Jun 2025 – Nov 2026
AI Engineer (Contract) *Remote*

- Core engineer and runtime owner on **Almanak Code**, a production agent harness (TypeScript/Bun) that designs, writes, fork-tests and backtests DeFi strategies from a chat prompt in **under 20 minutes**; **∼1,000 builds** across 13 protocols and 9 chains in evals and testing
- Engineered core harness systems: agent loop and tool orchestration, subagents with failure propagation, session persistence and resume, an **ACP** bridge to the web app, and **MCP servers** for platform actions
- **Cut LLM inference costs 70%** through prompt-cache engineering: stable prefix, a frozen tool list across modes (mode-switch cache hits **0%** → **91%**), and history replay that never rewrites sent context
- Shipped human-in-the-loop flows (questions, awaiting-input state, mid-turn steering) so long-running agents pause for decisions without losing state
- Built the eval system: headless and web-UI end-to-end runs that score strategies and catch regressions

Projects & Open Source

fastmcp (MCP framework): fixed `tools/list` failing when one schema can't convert to JSON Schema (#519); credited for a high-severity OAuth vulnerability (GHSA-8j7c-qjcg-7rrv)
sessmv: CLI on npm that moves Claude Code sessions between machines over SSH
Geonaut: geography game on Android and web, built by coding agents in an end-to-end testing loop I designed
Shiami: multi-agent assistant on LangGraph, a supervisor routing to specialist agents with RAG

Education

Maharaja Agrasen Institute of Technology Delhi, India
B.Tech in Artificial Intelligence and Data Science; CGPA 8.65/10 *Aug 2022 – Jun 2026*

Achievements

16 hackathon wins, incl. two $5,000 prizes in 2024 (Filecoin track winner, Theta honorable mention)

Technical Skills

Languages: TypeScript, Python, SQL, Rust
AI & Agents: Agent harnesses, MCP, ACP, prompt caching, context engineering, evals, RAG, LangGraph; Anthropic, OpenAI, Gemini APIs
Stack: Bun, Node.js, React, Next.js, FastAPI, PostgreSQL, Redis, Docker, GCP, AWS, GitHub Actions, Capacitor
