Parth Gupta

AI Engineer — Agent Harnesses & Coding Agents

hello@parthg.dev | parthg.dev | github.com/parthg1901 | linkedin.com/in/parthg1901

Summary

AI engineer who builds production agent harnesses: agent loops, tool orchestration, prompt-cache engineering, MCP/ACP integration, and evals. Focused on making long-running agents reliable, cheap and measurable.

Experience

Almanak Jun 2025 – Nov 2026

AI Engineer (Contract) *Remote*

- Core engineer and runtime owner on **Almanak Code**, a production agent harness (TypeScript/Bun) that designs, writes, fork-tests and backtests DeFi strategies from a chat prompt in **under 20 minutes**
- Engineered core harness systems: agent loop and tool orchestration, subagents with failure propagation, session persistence and resume, and a messages-and-parts conversation architecture
- **Cut LLM inference costs 70%** through prompt-cache engineering: stable prefix, a frozen tool list across modes (mode-switch cache hits **0% → 91%**), and history replay that never rewrites sent context
- Bridged the agent to the web app over the **Agent Client Protocol (ACP)** and built **MCP servers** exposing platform actions to the agent
- Shipped human-in-the-loop flows (question widgets, awaiting-input state, mid-turn steering, message queuing) so long-running agents could pause for user decisions without losing state
- Built the eval system: headless and web-UI end-to-end runs that score strategies and catch regressions
- Agent completed ∼**1,000 strategy builds** in internal evals and testing across **13 protocols and 9 chains**, from LPs and leveraged loops to delta-neutral hedges and perps
- Launched a RAG documentation assistant (Cohere reranking) on the docs site and Discord, and gave the troubleshooting agent live access to execution logs to find bugs in deployed systems

Projects

Shiami | *Python, TypeScript, LangGraph, Next.js* Jan 2025 – Jun 2025

- Designed a multi-agent AI assistant for on-chain finance: a supervisor routing tasks to specialist agents through handoff tools, with FAISS-backed retrieval, web search (Browser Use) and image generation
- Rebuilt the open-source ZerePy agent framework on LangGraph, turning ∼10 protocol integrations into tools
- Shipped user-built agent workflows (scheduled price alerts, emails, transactions) running on delegated wallets, plus a Next.js app with an agent dashboard and per-agent logs; released V1 publicly

Geonaut | *React, TypeScript, Capacitor* 2026

- Shipped on Android and as an offline-capable web app: live multiplayer rooms (2–8 players), spaced-repetition review, and 20+ game modes across 197 countries, regions, rivers and historical maps
- Built by coding agents in an end-to-end testing loop: agents implemented each feature from a spec, tested it in a browser and fixed failures; I designed the loop and owned product and review

Education

Maharaja Agrasen Institute of Technology Delhi, India

B.Tech in Artificial Intelligence and Data Science; CGPA 8.65/10 *Aug 2022 – Jun 2026*

Achievements

16 hackathon wins, including two $5,000 prizes in 2024 (Filecoin Data Economy track winner, Theta Hackathon honorable mention)

Technical Skills

Languages: TypeScript, Python, SQL, Solidity, Rust
AI & Agents: Agent harnesses, MCP, ACP, prompt caching, context engineering, evals, RAG (FAISS, Cohere), LangGraph; Anthropic, OpenAI, Gemini, OpenRouter APIs
Frontend & Mobile: React, Next.js, Tailwind CSS, shadcn/ui, Zustand, D3, Capacitor (Android), PWAs
Backend & Infra: Bun, Node.js, NestJS, Express, FastAPI, Prisma, Hasura (GraphQL), PostgreSQL, Redis, Docker, GCP (Cloud Run), AWS, GitHub Actions
